

Wellhead & Production Valve Services

Well Head and Valve Services

Quality Energy Services offers a complete range of manual and automated valves for both the upstream and downstream facets of the oil and gas industry. We offer new well heads from 5,000 psi to 15,000 psi with the ability to provide 20,000 psi equipment or special alloy trees/valves if time permitted. This division has the ability to repair all valve on site including wellhead, pipe line or your flow system. We currently run fourteen repair and maintenance supervisors and man four full time seven and seven or fourteen and fourteen maintenance crews. Additionally we provide our clients with a hot tap system utilized when a well head has a damaged or frozen valve. We recently added the personnel and expertise to drill through casing and pipe via the casing manifold or pipe. Current operation is housed in our Houma, LA district.
